

Secure Wi-Fi for unsecured connections

A VPN or Virtual Private Network gives you privacy and anonymity when connected to public or home Wi-Fi.

Think of a VPN as a private tunnel between your devices and internet, protecting the data you transmit from being intercepted by cyberthieves.

BLOCKS TRACKING FOR ADS

Protects your online privacy by blocking intrusive activities like the tracking of your online activities or location.

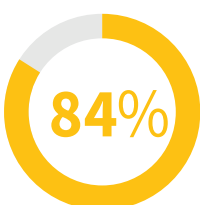

BANK-GRADE ENCRYPTION

The information you send and receive is made unreadable, secure and private until it reaches the correct destination.

ONLINE PRIVACY

Use your Mac®, PC or mobile device for secure browsing, even on public Wi-Fi hotspots and unsecured networks.

of consumers want to do more to protect their online privacy, but more than half don't know how.¹

2/3 of adults are more concerned about their online privacy than ever before.¹
